DETAILED ACTION

This is a response to Applicant's Remarks filed on July 16, 2008.

Claims 1-10, 13-14, 17-22, and 27-42 are currently pending.

Response to Arguments

1. Applicant's arguments, see Remarks, filed July 16, 2008, with respect to claims 1-10, 13-14, 17-22, and 27-42 have been fully considered and are persuasive. The rejection of claims 1-10, 13-14, 17-22, and 27-42 has been withdrawn. However, upon further consideration, a new ground(s) of rejection is made for claims 40-42 in view of newly cited references by Makinson.

Allowable Subject Matter

1. Claims 1-10, 13-14, 17-22, and 27-39 are allowed.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

2. Claims 40-42 are rejected under 35 U.S.C. 102(e) as being anticipated by

Makinson [US 7023861 B2].

Regarding claim 40, Makinson teaches a device for managing network traffic flow, the device comprising: a first processor [Makinson Fig 8, Itm 14], the first processor

configured to receive network traffic content [Makinson 4: 31-34], pass a first portion of the network traffic content downstream [Makinson 4: 57-59], and pass a second portion of the network traffic content to a stack [Makinson 5: 4-12 --Examiner notes it is inherent that a buffer/stack exist when a mixture of previous data packets are retained to be concatenated into complete data files upon receipt of corresponding latest data packet for scanning.] for allowing the second portion to be scanned for content that is desired to be detected [Makinson 4: 59-64]; and a second processor [Makinson Fig 8, ltm 16'] that is configured to scan the second portion for the content desired to be detected [Makinson 6: 18-30].

Regarding claim 41, Makinson teaches the device of claim 40, wherein the first or the second processor is further configured to pass the second portion downstream after the second portion is scanned [Makinson 5: 32-36].

Regarding claim 42, Makinson teaches the device of claim 40, wherein the first portion of the network traffic content is not scanned for the content that is desired to be detected [Makinson 4: 57-59].
